

GeoRiskLab Real-Data V0.1 Report

This report is generated from user-supplied local raw data for real GPR and developed/emerging Fama-French return inputs.

Empirical summary

Sample period: 2000-01-01 to 2026-04-01
Months: 316
Mean EM excess return: 0.6542
Mean developed excess return: 0.5245
Mean EM-developed spread: 0.1297

Baseline regression

Coefficient: -0.0186
Std. error: 0.2132
p-value: 0.9304
95% CI: (-0.437, 0.399)

Horizon response

Horizon	Estimate	Std. error	p-value	95% CI
1m	-0.0186	0.2132	0.9304	(-0.436, 0.399)
3m	-0.1258	0.5818	0.8288	(-1.266, 1.015)
6m	0.3983	0.6047	0.5101	(-0.787, 1.584)

Interpretation

A one standard deviation increase in gpr_change_z is associated with a lower EM minus developed spread of 0.019 percentage points over the next month. This is descriptive, not causal.

Summary statistics

market_class	observations	mean_excess_return	mean_next_month_return	negative_next_month_share
developed	316	0.5245	0.5433	0.3797
emerging	316	0.6542	0.6549	0.4051

Forecast comparison

	model	rmse	mae	oos_r2
historical_mean	2.939273	2.342179	0.000000
